

Combination air valve Mod. LYNX 3F

The FCC combination, triple function, automatic air valve Mod. LYNX 3F will ensure the proper operation of the pipeline network allowing the release of air pockets during working conditions, the evacuation and entrance of large volumes of air during filling and draining operations.

Technical features and benefits

- Single chamber body in ductile cast iron, PN 40 bar rated, provided with internal ribs for accurate guiding of the floats.
- Aerodynamic deflector in stainless steel to avoid premature closures of the mobile block.
- Drainage valve, produced by FCC, for chamber control and pressure relief during maintenance.
- Mobile block composed of a cylindrical float and upper disk in solid polypropylene, joined together by the FCC air release system in AISI 316 (patent pending). The solid cylindrical floats, obtained by CNC machining, avoid deformations and ensure a great sliding precision inside the body processed ribs and a perfectly vertical thrust.
- Nozzle and gasket holder, part of FCC air release system, entirely made in AISI 316 and designed with gasket compression control to prevent aging process and consequent leakage during working conditions.
- Maintenance can be easily performed from the top, without removing the air valve from the pipe.
- Cover in ductile and screen in stainless steel as a standard execution to prevent the entrance of insects, with three optional outlets (for submerged applications, air inlet only, air outlet only).

Applications

- Main transmission lines.
- Water distribution networks.
- Irrigation systems.
- In general this model is used on changes in slope and at the high points of the pipeline.

Operating principle

Discharge of large volumes of air

During the pipe filling it is necessary to discharge air as water flows in. The LYNX 3F, thanks to the aerodynamic body and the deflector, will make sure to avoid premature closures of the mobile block during this phase.

Air release during working conditions

During operation the air produced by the pipeline is accumulated in the upper part of the air valve. Little by little it is compressed and the pressure arrives to water pressure, therefore its volume increases pushing the water level downwards allowing the air release through the nozzle.

Entrance of large volumes of air

During pipeline draining, or pipe bursts, it is necessary to bring in as much air as the quantity of outflowing water to avoid negative pressure and serious damages to the pipeline, and to the entire system.

Optional

■ **Vacuum breaker version Mod. LYNX 2F**, to allow the entrance and discharge of large volumes of air only. This model is normally recommended in changes in slope ascending, long ascending segments, dry fire systems, and wherever the air release won't be required.

■ **Version for submerged applications, SUB series**, available both for LYNX 3F and 2F Models, with threaded elbow for air conveyance. The design sprang from the necessity of having an air valve performing also in case of flood, without the risk of contaminated water entering the pipeline. Another benefit of SUB is the possibility of conveying spurts coming from the rapid closure of the air valve.

■ **Version for air discharge only EO series**, available both for LYNX 3F and 2F models. The most important application of EO is to allow the air valve installation in those locations of the system where HGL may drop below the pipe profile, and to any other node where for project requirements air entrance must be avoided, such as in pump suction lines or siphons pipelines.

■ **Version for air entrance only IO series**, available for LYNX 2F model only. The most important application of IO is to allow the air valve installation in those locations of the system where, for project requirements, air discharge and release must be avoided.

Technical data

Air flow performance charts

AIR DISCHARGE DURING PIPE FILLING

AIR ENTRANCE DURING PIPE DRAINING

AIR DISCHARGE DURING PIPE FILLING

AIR ENTRANCE DURING PIPE DRAINING

The air flow charts were created in Kg/s from laboratory tests and numerical analysis, without the screen, then converted in Nm³/h using a safety factor.

Working conditions

Treated water max. 60°C.
Max. pressure 40 bar.
Min. pressure 0,2 bar. Lower on request.

Nozzle choice

Nozzle diameter in mm according to the air valve size and the PN.

	PN 10	PN 16	PN 25	PN 40
2"-DN 65	1,2	1,2	1	0,8
DN 80	1,8	1,5	1,2	0,8
DN 100	1,8	1,5	1,2	1
DN 150	2,4	1,8	1,8	1,2
DN 200	4	3	2,4	1,8
DN 250	4	4	3	2,4
DN 300	4	4	4	4
DN 350	4	4	4	4
DN 400	4	4	4	4

Standard

Designed in compliance with EN-1074/4 and AWWA C-512. Flanges according to EN 1092/2 or ANSI 150. Epoxy painting applied through fluidized bed technology blue RAL 5005. Changes on the flanges and painting on request.

Weights and dimensions

CONNECTION inch/mm	A mm	B mm	C mm	D mm	Weight Kg

FOX/LYNX air valves range vacuum breaker version

Designed to allow the discharge and entrance of large volumes of air during pipe filling and draining /bursts, this version is usually recommended in changes in slope ascending, long ascending segments, dry fire systems, and wherever the air release won't be required.

FOX/LYNX Snorkel / Submergence kit - Mod. SUB

The air conveyance system SUB, provided with watertight threaded elbow for air conveyance and submerged applications, has been created to be retrofitted on existing FCC FOX air valves or as a standalone version. Another benefit of SUB is to convey spurts coming from the rapid closure of the air valve. The SUB kit is produced in plastic, different materials are available on request.

FOX/LYNX air valves range discharge only kit EO

The most important application of EO is to allow the air valve installation in those locations of the system where HGL may drop below the pipe profile, and whenever for project requirements air entrance must be avoided.

FOX/LYNX air valves range entrance only kit IO

The most important application of IO is to allow the air valve installation in those locations of the system where, for project requirements, air discharge and release must be avoided.
